

AUTOMATION TRAINING

- FULLY CUSTOMISED TRAINING
- ENGAGING INDUSTRY EXPERTS
- EMPOWERING YOUR PEOPLE

INSIGHT ENGINEERING IS A FULL SERVICE ELECTRICAL ENGINEERING FIRM OFFERING THE COMPLETE PACKAGE IN AUTOMATION SOLUTIONS.

Following the design and build of all systems, or in the case of an existing facility, we offer fully customised training courses to our clients. Our industry experts will provide your team with the skills to

- Operate the automation system
- Interrogate and support your technology
- Address any required changes that may arise as your business develops

Our experience shows that hands-on training conducted in groups of about five people at either your facility or in our offices provides the best environment for skill acquisition. Individual and smaller group training sessions are also available.

Whether held at Insight Engineering or on your site, all the information and materials are provided to your team to ensure both theoretical and practical knowledge is gained.

Insight Engineering can train your people using the actual PLC, HMI and SCADA projects running at your facility. This makes the training a quantum more involving, relevant and valuable.

TESTIMONIALS

"Engaging Insight Engineering for our Automation training gave our Electricians the knowledge to maintain our system and empowered them to act with confidence."

Chris Little
Boral

Following the initial training session, follow-up refresher sessions are available to keep your teams skills current.

Flexibility is the key. We will work with you to develop a training regime that is "Best Fit" for your operation.

Combined with our Full Service Electrical Design Solutions, the Insight Engineering Automation Training provides the ideal solution to maximise output from your business.

OUR EXPERIENCE – OUR PEOPLE

At Insight Engineering we are passionate about providing the best systems and processes for our clients. Our team will empower staff by imparting knowledge to control and manipulate the system, putting you well ahead of your competitors.

"Over the past 15 years, I have been fortunate to work with businesses and their staff to ensure they get the most out of their systems. At the end of the day, it's the ability of staff to manage their systems that makes the greatest difference to productivity."

John Hendriks
Engineering Manager
